# A brief history about Shadow

## October 2015 - Here we are

Shadow's history starts a few years ago. Emmanuel Freund and Acher Criou, then developing smartphones for the senior citizens market, realize the difficulties of ensuring that hardware would always be able to meet the software's needs. They want to create a small device with a high capacity battery, the best screen, and the best performance possible. Long story short, they are trying to square the circle.

Why not remove hardware constraints by relocating the most powerful components in the cloud, allowing the client's hardware to be minimal all the while getting a far greater autonomy and the massive computing power provided by a datacenter? That's how the idea of a modern, high-end cloud computing technology starts to form. Experts conclude that current technology were not up to the task. Emmanuel and Acher decide to take on the challenge.

Shadow is born.

## January 2016 - Shaping dreams into reality

Joined by Stéphane Héliot, Acher and Emmanuel create Blade to perform all the R&D necessary to make Shadow a reality. A proof of concept allows them to raise 3 million euros from private investors.

## October 2016 - First tests, first customers

Shadow is officially introduced to the press. Journalists can experience the future of personal computer and try prototypes of the Shadow service. A first batch of preorders is opened. In the meantime, a new seed round of 10 million euros is completed.

## June 2017 - 50 and counting

Blade welcomes its 50th employee. The company now has 5000 paying beta customers. Android, Mac and Windows apps allow gamers to play the most demanding PC titles on most devices, anytime, anywhere. A third seed round of 51 million euros is achieved from the same private investors who have trusted Blade since its early days.

## August 2017 - Let's move!

Opening of a new office in Palo Alto, California. The french team moves to a 800 sq. meters building located in the heart of Paris, anticipating massive recruitments by the end of the year.

## 4th quarter of 2017 - Germany and UK launches

## 2018 - Hello World, target of 100 000 customers.

# How Does It Work?

Our servers

High Speed  
Internet

Shadow

1. Plug in your favorite peripherals.
2. Turn on your Shadow.
3. Log in to your Shadow account.
4. Play!

## Does it require a good Internet connection?

DSL and fiber lines starting at 10Mb/s provide a great experience. Shadow will automatically adjust its settings to your available bandwidth. You can also enjoy the Shadow apps on Windows, MacOS and Android through wifi and 4G.

## Is it any different from a regular computer?

No. Shadow works exactly like a regular PC. It's your computer. Just better. Shadow is a Windows 10 PC with cutting edge components. You can install any app you want. Play, work, enjoy a lightning fast Internet connection.

## About Blade

We are a french tech company. Our vision is to free users from the constraints of physical hardware by giving them access to a powerful cloud-based computer.

Our first product, Shadow, targets one of the most demanding types of PC users: gamers. Our goal is to meet gamers' expectations as a proof that our technology can be adapted to virtually every PC need.
